

A world map illustrating the global distribution of the COVID-19 pandemic. The map uses a color scale to represent the number of cases per country, with a legend on the right side. The legend shows a gradient from light blue (0 cases) to dark blue (100+ cases). Countries with the highest number of cases are colored dark blue, including the United States, Spain, Italy, France, Germany, and the United Kingdom. Many other countries are colored light blue, indicating a lower number of cases. Some countries are colored black, which typically signifies that the data for those countries is either missing or that the number of cases is so high that it falls outside the scale shown. The map also shows the outlines of the continents and the major bodies of water.
